ANESTHESIA AND SURGICAL CONSENT

Date _____ OwnerName _____ PetName _____

Phone number to call after surgery _____ Signature _____

SURGERY OR TREATMENT REQUESTED

Spay _____ Neuter _____ Dental _____ Cat Declaw 2 Feet _____ Cat Declaw 4 Feet _____ Other _____

When was the last time your pet had anything to eat or drink? _____

Has your pet shown any signs of illness in the past 24 hours? NO YES (If yes, list signs)

What medications is your pet currently taking? _____

Has your pet had any adverse reactions to anesthesia in the past? NO YES

List any other treatments you would like for your pet while in our hospital such as nail trim, bath, check anal glands, heartworm test, feline leukemia test, vaccinations, microchipping, etc. _____

There is a \$20 additional fee on spays if your pet is pregnant or in heat.

Any patients with fleas and/or ticks will be treated at the owner's expense to ensure a flea/tick free environment.

PRE-ANESTHETIC BLOOD TESTING

Our greatest concern is the well-being of your pet. Some conditions including disorders of the liver, kidneys, and blood are not detected unless blood testing is performed. Anesthetic agents are processed in the body by the liver and kidneys. Any disorder regarding these organs can increase your pet's anesthetic risks, including death. For this reason, all of our veterinarians highly recommend pre-anesthetic blood testing.

Please choose one of the following options:

BLOOD TEST REQUIRED OF ALL PATIENTS 5 YEARS AND OLDER AND FOR CERTAIN SURGICAL PROCEDURES

_____ YES I want my pet to have pre-anesthetic blood testing for a cost of \$85

_____ NO I decline pre-anesthetic blood testing if not required and I understand the risks in not testing the blood for abnormalities

_____ Pre-anesthetic blood testing is required of all patients 5 years and older and for certain surgical procedures

INTRAVENOUS CATHETER AND FLUID THERAPY

We recommend that every patient undergoing anesthesia have an IV catheter placed and be on fluids throughout the procedure. The benefits of having an IV catheter placed include: maintaining blood pressure, keeping the patient hydrated, providing immediate access to the vein to deliver medication in the event of an emergency, and helping the patient expel the anesthetics from their body faster, allowing them to recover more quickly and smoothly.

Please choose one of the following options:

_____ YES I want my pet to have an IV catheter for a cost of \$49

_____ NO I understand the benefits but decline an IV catheter and fluid therapy for my pet, unless required by doctor

PAIN MEDICATION (for an additional charge)

We recommend pain medications for all of our surgical patients and for our dental patients that have extractions.

YES I want my pet to have pain medication during surgery and to go home

NO If optional, I understand the benefits but decline pain medication for my pet.

MICROCHIP \$45

Microchipping is a way of permanently identifying your pet. The chance of recovering a lost pet is significantly improved if they have a microchip. During anesthesia is a perfect time to microchip your pet.

YES I want my pet to receive a microchip

NO I understand the benefits of microchipping my pet, but decline today

My pet is already microchipped
