Laser Therapy Consent Form

Client Name_____

Pet Name_____

Phone number_____Email_____

Laser Therapy works at the cellular level to decrease pain and inflammation. It promotes faster healing times and increased range of motion. It does not involve medications and is considered a holistic approach. Laser therapy works in combination with other forms of treatment and is a supportive care supplement, not a cure. Special glasses must be worn by owners, staff, and pets present for treatment as the laser beam is applied over the desired areas in need of healing. This can be a startup treatment for chronic conditions, maintenance sessions, or acute conditions as doctor prescribes. Sessions can last 2 – 30 minutes depending on areas and conditions being treated.

By signing this, I authorize to have my pet receive laser treatment as prescribed by the Veterinarian.
