

WHAT IS LASER THERAPY?

Laser Therapy is a non-invasive, drug-free treatment option that accelerates healing in many superficial, musculoskeletal, and deep tissue conditions. The laser drives light energy into the tissue to increase cellular repair and rejuvenation. This therapy reduces inflammation and pain caused by a variety of conditions, such as:

- Post-Operative Care
 - Suture area healing
 - Reduces inflammation
 - Reduces pain and irritation
- Post Dental Procedure Care
 - Reduces inflammation caused by gingivitis
 - Reduces irritation from scaling teeth
 - Reduces pain and accelerates healing of tooth extractions
- Wound Care
 - Accelerates healing
 - Promotes wound closure
- Acute Conditions
 - Sprains and Spasms
 - Stress fractures
 - Anal Sacculitis
 - Edema
 - Otitis (middle ear infections)
- Chronic Conditions
 - Arthritis
 - Collapsed Disk Space
 - Pain Management
 - Increases quality of life for all ages of patients
