

COBB ANIMAL CLINIC, P.A. Dentistry Information

- Your pet's safety and comfort are our number one concern at Cobb Animal Clinic, P.A. Before your pet has a dentistry, it will be examined for any problems that could interfere with anesthesia and will be monitored during recovery to help insure that all goes well.
- Pre-anesthetic blood work is recommended on all dentistry patients. This blood work is included in the price of our routine dental procedures.
- For any pets over 6 years of age and all pets with chronic health problems, we recommend more extensive medical tests to evaluate the safety of the anesthesia and dentistry.

To prepare for this appointment please:

- Take up all food and water by 10:00 p.m. the night before the dentistry, unless you are advised differently by your veterinarian.
- Have your pet here between 7:00 a.m. and 8:00 a.m. so that our technicians may begin the necessary pre-anesthetic blood work.

Please let us know if you have any questions about pre-anesthetic testing or any other part of the dental procedure scheduled for your pet.
